# Introduction

This manual explains the specifications and handling of the Electromotive Systems *EtherNet/IP Option Card CM092* for the Electromotive Systems models Impulse•G+ Series, and Impulse•VG+ Series drives. The *EtherNet/IP Option Card CM092* connects the drive to an *EtherNet/IP* network and facilitates the exchange of data. In this document, the word “inverter”, “ac drive” and “drive” may be used interchangeably. To ensure proper operation of this product, read and understand this manual. For details on installation and operation of the drive, refer to the appropriate drive technical manual.

## Technical References

---

Refer to the following publications for information about the IMPULSE SERIES 3:

- IMPULSE G+ SERIES 3® Technical Manual
- IMPULSE VG+ SERIES 3® Technical Manual

Impulse® is a registered trademark of Electromotive Systems

MODBUS® is a registered trademark of Schneider Automation, Inc.

All trademarks are the property of their respective owners.

## Technical Support

---

Technical Support Service Center: 1-800-288-8178.

Provides telephone support to customers, relating to installation, start-up, programming, and troubleshooting of drives products.

# Chapter 1 Installation

## Product Specification

Operating Temperature:	0 to 55°C
Storage Temperature:	-20 to 70°C
Humidity:	90% Relative Humidity (no condensing).
Vibration:	1G at less than 20Hz, up to 0.2G at 20 to 50Hz.
Altitude:	3300ft or less.

## Unpack & Inspect

Unpack the *EtherNet/IP Option Card CM092* Option kit and verify that all components are present and undamaged.

OPTION Kit Parts
EtherNet/IP Option Card CM092 Card (UTC000068)
Shielded RJ45 M-F Cable (UWR00574-1)
Ground Wire (UWR00575-1)
4"x1" Insulated Tubing (M45094075004)
Cable Ties (UWS-0137)
Installation Guide
MAC ID Label (Unique for each <i>EtherNet/IP Option Card CM092</i> )

Example Label: MAC ID: 00-20-B5-24-11-13

## Installation & Wiring

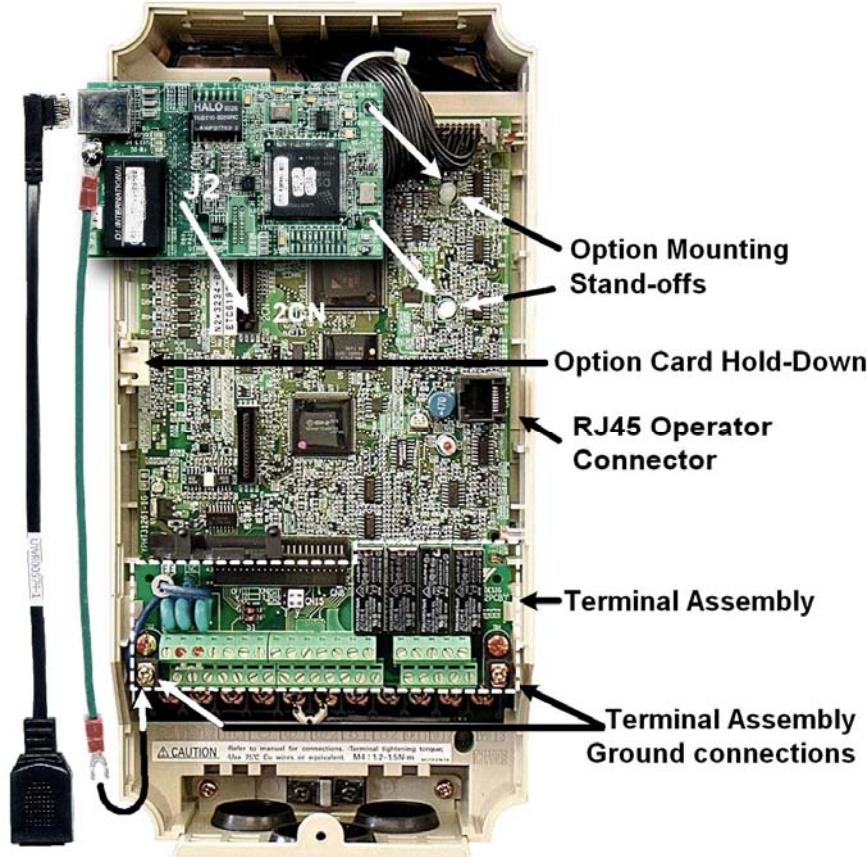

- Connect power to the drive and verify that the drive functions correctly. This includes running the drive from the operator keypad. Refer to the appropriate drive technical manual for information on connecting and operating the drive.
- Remove power from the drive and wait for the charge lamp to be completely extinguished. Wait at least five additional minutes for the drive to be completely discharged. Measure the DC BUS voltage and verify that it is at a safe level.
- Remove the operator keypad and drive cover.
  - Remove the operator keypad.
  - Remove the terminal and control covers.

Remove the option card hold-down by carefully compressing the top and bottom until it becomes free of its holder. Lift it out.

- Mount the *EtherNet/IP Option Card CM092* on the drive.

Connect the ground cable supplied to ground terminal J6 on the *EtherNet/IP Option Card CM092*. Connect the RJ45 M-F cable supplied in the option kit to the *EtherNet/IP Option Card*

- CM092. Align the J2 connector on the back of the *EtherNet/IP Option Card CM092* with its mating 2CN connector on the drive control card.
- Align the two standoffs on the front of the drive control board with the two holes on the right side of the *EtherNet/IP Option Card CM092*.
- Press the *EtherNet/IP Option Card CM092* firmly onto the drive 2CN connector and standoffs until the J2 connector is fully seated on 2CN and the drive standoffs have locked into their appropriate holes.
- Route the RJ45 M-F cable and the ground cable along the left-inside of the drive case.
- Replace the option card hold down.
- Connect the ground wire to the ground terminal on the terminal assembly.
- Adhere the supplied MAC ID Label on the side of the drive either above or below the drive nameplate.
- Apply power to the drive and verify that the drive functions correctly.
- Verify that the MS/RUN and PWR LEDs on the EtherNet/IP Option Card CM092 are both GREEN. (Refer to the section on LEDs below)

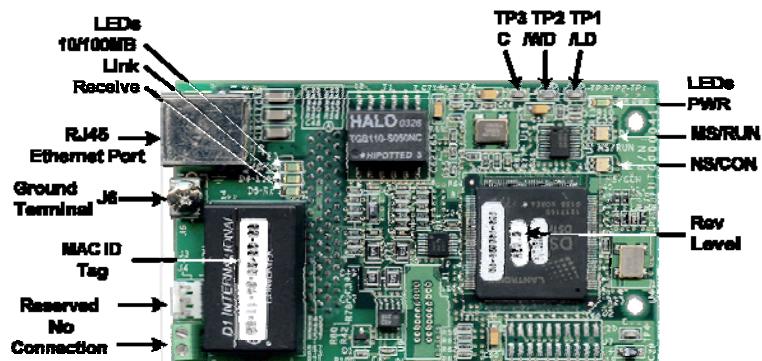

## Option LEDs

### LED Definitions

The states of the *EtherNet/IP Option Card CM092* card LEDs after the power up sequence has completed are described below. Please wait for at least five seconds for the loading process to complete before verifying the status of the LEDs.

Des	Label	Description
D1	MS/RUN	GREEN – Card Functioning Normally RED – Card Failure
D2	NS/CON	GREEN – Connection Made GREEN BLINK – Control Connection Active (500ms cycle) RED – Connection Fault
D3	10/100	GREEN – 100Mbs Connection Speed
D4	LINK	GREEN – Link Established
D5	Rx	GREEN - Message Received
D8	PWR	GREEN - Appropriate Power Supplied to Card

## EtherNet/IP Option Card CM092 Card LED States

LED	Indicator	Behavior	Description
MS/RUN	Steady OFF	No Power	No power is applied to the option card the LED remains OFF.
	Green Steady	Normal Operation	The option card is operating correctly with all initialization checks complete.
	Green Flash	Standby / Initializing	The option card is in process of configuring or waiting for configuration information.
	Red Flash	Minor Fault	The option card has detected a recoverable minor fault, such as incomplete configuration. Faults that are typically corrected by cycling power to the drive.
	Red Steady	Major Fault	The option card has detected a non-recoverable major fault, (Ram Error, corrupt storage, non - unique MAC address). All major faults will require more intervention than a power cycle to correct.
	Green/Red Flash	Option Card Test	Power-up sequence and tests.
NS/CON	OFF Steady	No Power or IP Address	The option card is powered OFF, or is not configured with an IP address and therefore cannot communicate on the network.
	Green Steady	Connected	The option card currently has one or more connections established to it.
	Green Flash	No Connections	The option card currently has no valid connections, but is correctly configured. The state is "waiting" for communication to assume.
	Red Flash	Connection Timeout	One or more of the established connections has timed out. The state will remain until all time-out connections have been re-established or a reset occurs. Recoverable minor fault
	Red Steady	Duplicate IP	A duplicate IP address has been discovered on the network or non-recoverable major network fault has occurred.
	Green/Red Flash	Network Test	Power-up sequence and tests.
10/100	OFF	10Mbps Connection	The network is operating at 10Mbps.
	Green	100Mbps Connection	The network is operating at 100Mbps.
Link	OFF	No Network Connection	The option card is not physically connected to the network. Check cable connections.
	Green	Network Connection	The option card is connected to a network.
Rx	OFF	No Message Received	No message to the option card is being received.
	Green	Message Received	A message to the option card is being received.
PWR	OFF	No Power	The drive is not powered or the option card is not securely connected to the drive.
	Green	Power Supplied	The option card has the appropriate power supplied.

# Chapter 2 Network Configuration

---

---

## Firmware Description

### Drive Status

The following Status Assembly information is available in the EtherNet/IP interface, which is implemented as the normal heartbeat information in CIP. The following states of the device along with the additional flags provide for monitoring the EtherNet/IP enabled Yaskawa drives.

Value	State	
0	Non-Existent	
1	Device Self-Test	
2	Standby	
3	Operational	
4	Major Fault – Recoverable	
5	Major Fault – Unrecoverable	
EV_	Event Flag	An Event has occurred
SF_	System Fault	Connection or BUS Fault.
UF_	User Fault	User Interaction Inhibited Operation
DF_	Device Fault	Drive or Hardware Fault

### Protocols

Standard TCP/IP and UDP/IP are implemented with the support of SNMP for network diagnostic features support. ARP, ICMP, and IGMP are supported for interoperable operation in IP networks.

### Ports

EtherNet/IP:      Port 0xAF12 for encapsulation packets, services and CPF-session management  
                      Port 0x08AE for I/O connections supported with timeout configurations.  
Web:                Port 80 (Http)  
Telnet:             Port 23(Telnet)

### Connections

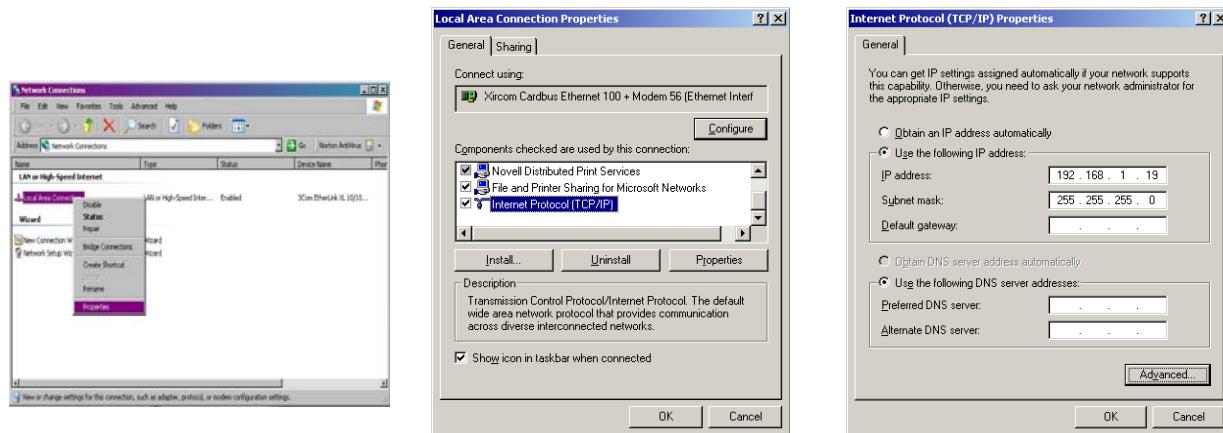

The maximum number of simultaneous connections is: 1 for I/O, 4 for Explicit.

### Cable Loss and Timeout

Timeout is calculated based on RPI configuration parameter on startup. It is specified in seconds. A setting of “0” disables the timeout. The default cable loss timeout is RPI\* 4.

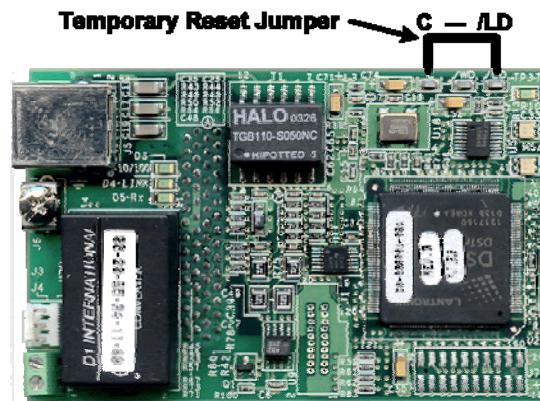

# Configure the PC Network Connection

- Select an existing or create a new network connection that will be used to communicate with the *EtherNet/IP Option Card CM092* card.
  - Select **Start** ⇒ **Settings** ⇒ **Network Connections** from the task bar
  - Select the network connection to be used
- Right click on the network connection and select properties from the menu
- Select **Internet Protocol (TCP/IP)** from the components displayed
  - If a TCP/IP selection is not available, it may be installed by selecting **Install**. Note that Administrator access is required and that the operating system installation CD may also be required. Consult with your IT department as needed.
- Select **Properties**
  - If the network connection already has an IP address assigned, ignore the following instructions
  - Select the **Use the following IP address** radio button
  - Enter the **IP address** as **192.168.1.19** and the **Subnet mask** as **255.255.255.0**. Check the system network schematic or with the IT department to make sure that the address does not already exist on the network.
  - Once the **IP address** and **Subnet mask** are entered select **OK**
- It may be necessary to reboot the PC in order for the changes to take affect.

## Reset the EtherNet/IP Option Card CM092 to the Default Address

- If the web page is not visible, check that the PC has been setup and connected properly. If the PC has been setup and connected properly and the web page is still not visible, the IP address of the *EtherNet/IP Option Card CM092* may not be set to its default IP address. To reset it to the default value,
  - Remove power from the drive and wait for the charge lamp to be completely extinguished. Wait at least five additional minutes for the drive to be completely discharged. Measure the DC BUS voltage and verify that it is at a safe level.
  - Place a jumper between test points **C** and **/LD** on the *EtherNet/IP Option Card CM092* card as shown in the figure to the right.
  - Reapply power to the drive and wait approximately 10 seconds for the power-up cycle to complete. You should now be able to connect to IP address 192.168.1.20 and open the main web page.
  - Remove the jumper between **C** and **/LD** on the *EtherNet/IP Option Card CM092* once the connection has been made and the web page visible.

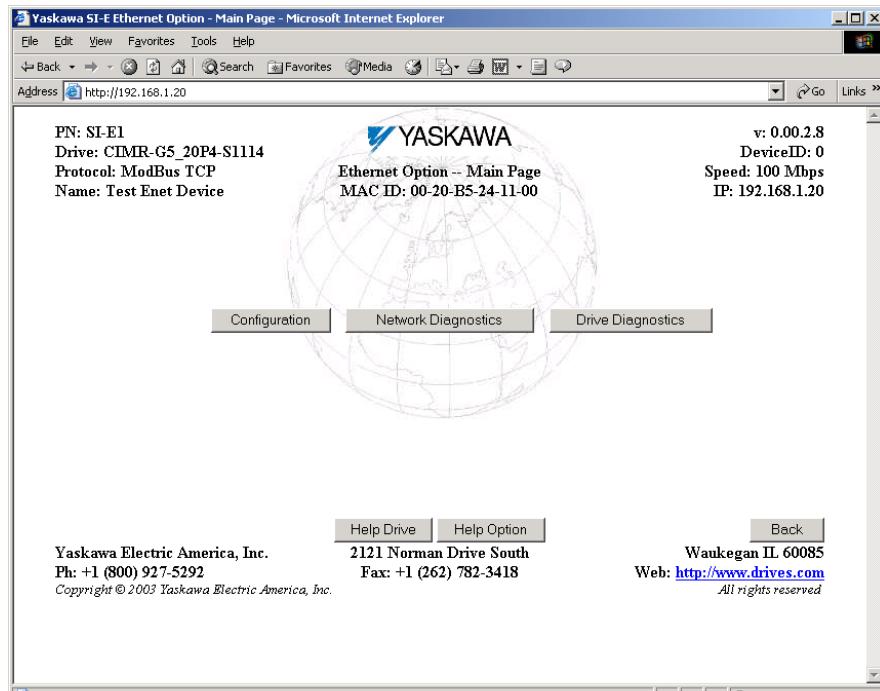

## Configure the EtherNet/IP Option Card CM092

- Select the **Configure** button from the main web page.
- Enter the desired IP address in the **IP** field and the desired Subnet Mask in the **Subnet** field. Check with the system schematic or network administrator to verify that the IP address and subnet mask entered are valid.
- Select the **Submit** button.
- A confirmation of the entered IP address and Subnet Mask will be displayed.
- Remove power from the drive and wait for the charge lamp to be completely extinguished. Wait at least five additional minutes for the drive to be completely discharged. Measure the DC BUS voltage and verify that it is at a safe level.
- If necessary, reconfigure the network connection of the configuration device to match the entered *EtherNet/IP Option Card CM092* configuration.
- Reapply power to the drive and connect to the desired network.

# Main Web Page

The main page is the first web page displayed. It displays the standard page header and footer along with links to the other web pages.

EtherNet/IP Option Card CM092 Main Web Page

## • Standard Header

The standard heading displays information specific to the installed *EtherNet/IP Option Card CM092*.

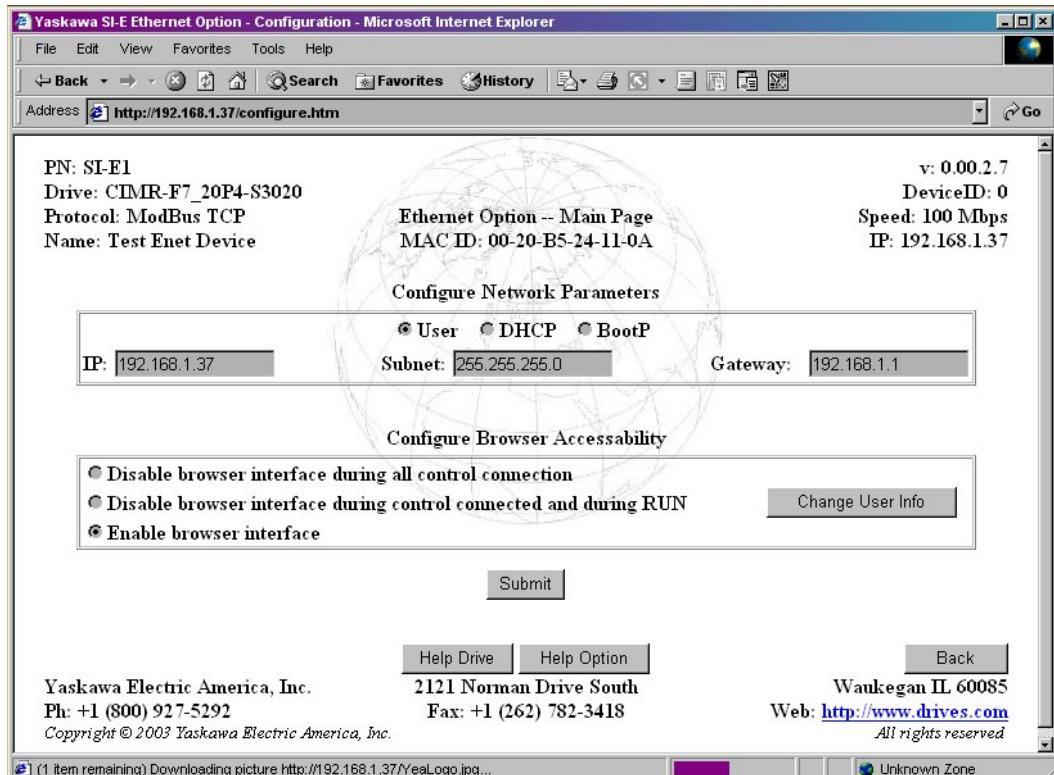

- **PN:** Part Number: Indicates the part number for the *EtherNet/IP Option Kit*— CM092
- **Drive** Model and Software: Indicates the drive family and model along with the drive control card software version. The software control card software version is represented by the last 4 digits preceded by ‘-S’.
- **Protocol Name:** Indicates the current protocol supported – EtherNet/IP
- **Serial Number:** Indicates the serial number of this particular *EtherNet/IP Option Card CM092*. Each card has a unique serial number.
- **MAC ID:** The MAC ID is unique to each *EtherNet/IP Option Card CM092*.
- **Option Software Version/Revision:** The first five (5) digits following “VST” represent the main *EtherNet/IP Option Card CM092* software version. The last digit represents the current revision level.
- **Config:** Server Configuration: Determines how and where the IP address is generated.
- **Speed:** Connection Speed: Current connection speed. Either 10 or 100 will be displayed.
- **IP Address:** The IP address of the current *EtherNet/IP Option Card CM092*.

## • Standard Footer

The standard footer contains information on how to contact Yaskawa for technical support.

# Configuration Web Page

The configuration page contains the standard header and footer along with a method of configuring the EtherNet/IP server and web server interfaces of the *EtherNet/IP Option Card CM092*.

## • Web Server Configuration

The web server configuration allows for the setting of the IP Address, Subnet Mask, Gateway and EtherNet/IP server type. All octets must contain a valid number between 0 and 255. The **Submit** button must be pressed, the accepted page displayed and the drive power cycled before any changes are effective.

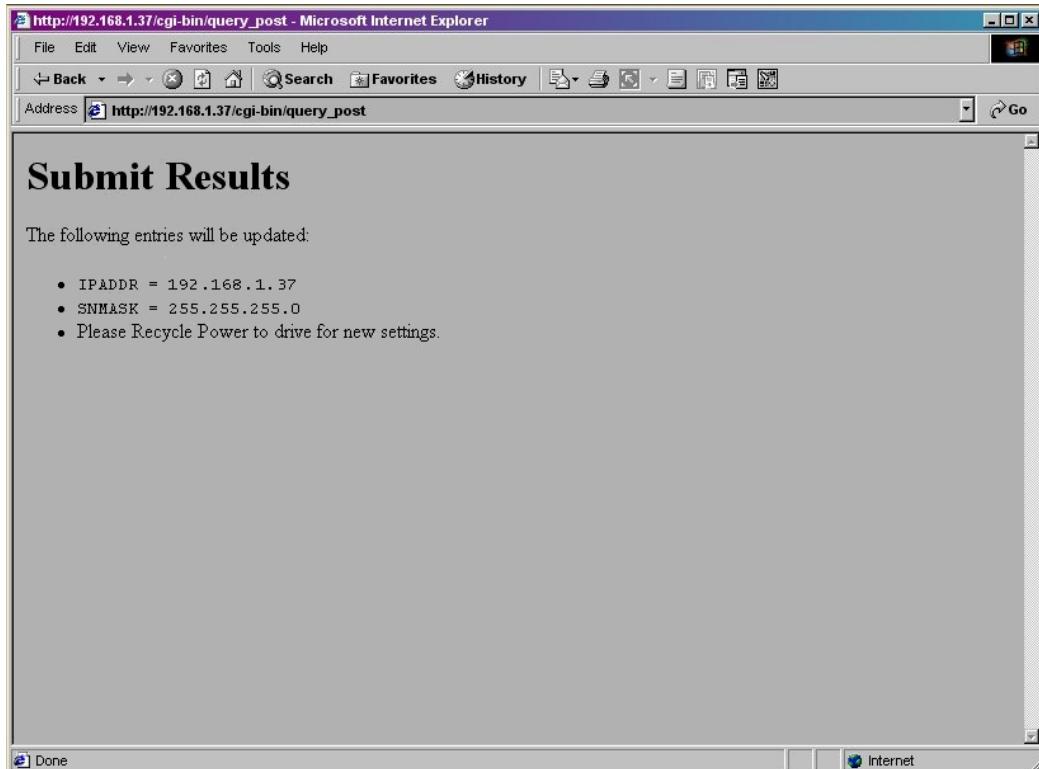

### Configure Network Parameters

- **IP:** A series of four (4) octets separated by “.” that determines the interface address for the current *EtherNet/IP Option Card CM092*.
- **SubNet:** A series of four (4) octets separated by “.” that determines the local area network for the *EtherNet/IP Option Card CM092*.
- **Gateway:** A series of four (4) octets separated by “.” that determines the IP Address of the gateway server. If a gateway server is not used, select **Do not use default gateway in system**. The gateway field must contain a valid IP address whether it is used or not and must not be blank.
- **Address Configuration Mode:**
  - **USER:** The user enters The IP address via the web interface.
  - **DHCP:** The IP Address is set by a DHCP server and not by the user via the web interface.
  - **BootP:** The IP Address is set by a BootP server and not by the user via the web interface.

**Note:** Verify that a DHCP or BootP server determines the network address before selecting either.
- **Browser Access Configuration:** In order to view the web pages, **Enable browser interface** must be selected.

## Submit Web Page

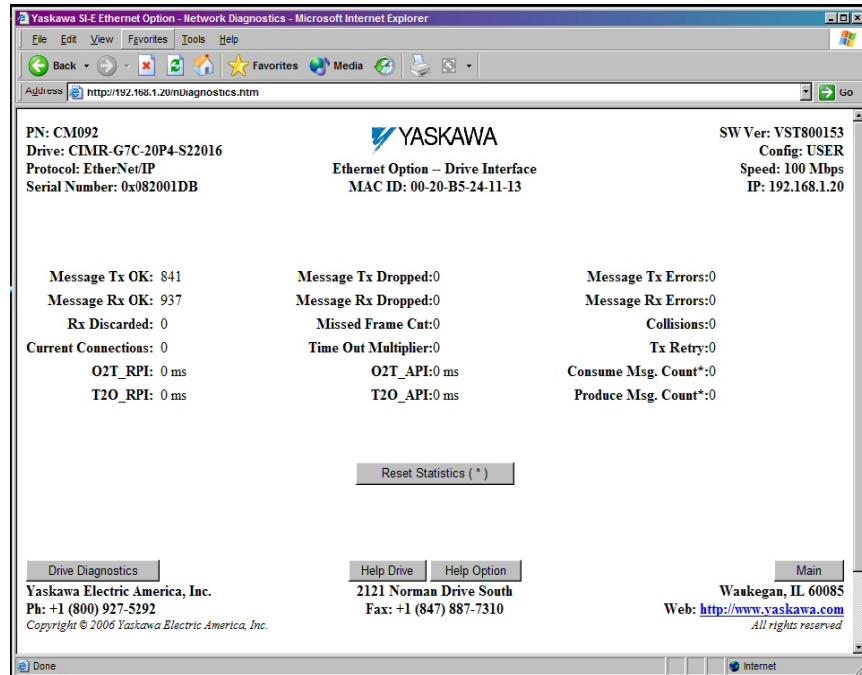

After any of the configuration parameters shown above have been changed, the submit button must be pressed to store the changed data. The drive must then be power cycled for the new data to take affect. Verify that the data on the submit page is correct.

After the data on the submit page has been verified and the drive power cycled, make sure to reset your network parameters and browser address accordingly.

# Network Diagnostics Web Page

The network diagnostics page displays the standard header and footer along with information relative to network and *EtherNet/IP Option Card CM092* performance.

## Network Diagnostics Web Page

- Message Tx OK: Transmit Message Count: The number of messages sent from the *EtherNet/IP Option Card CM092*.
- Message Rx OK: Receive Message Count: The number of messages received by the *EtherNet/IP Option Card CM092*.
- Rx Discarded: Received Messages Discarded: The number of received messages discarded by the *EtherNet/IP Option*.
- Current Connections: The number of established connections used on the *EtherNet/IP Option Card CM092*. This is the total of explicit, implicit and “DriveWizard”connections.
- O2T RPI: The time interval for Master to Slave messaging during I/O connection (mS).
- T2O RPI: The time interval for Slave to Master messaging during I/O connection (mS).
- Message Tx Dropped: Dropped Transmit Messages: The number of dropped transmit messages sensed on the *EtherNet/IP Option Card CM092*.
- Message Rx Dropped: Dropped Receive Messages: The number of dropped receive messages sensed on the *EtherNet/IP Option Card CM092*.
- Missed Frame Cnt: The number of missed frame errors sensed on the *EtherNet/IP Option Card CM092*.
- Time Out Multi: The current timeout multiplier for I/O messages received from the master controller, during the I/O connection.
- O2T API: The time interval for Master to slave setup messaging during I/O connection (mS).
- T2O API: The time interval for Slave to Master setup messaging during I/O connection (mS).
- Message Tx Errors: Transmit Message Errors: The number of error messages sent from the *EtherNet/IP Option Card CM092* due to not processing or incorrect processing.
- Message Rx Errors: Receive Message Errors: The number of error messages received on the *EtherNet/IP Option Card CM092*due to not processing or incorrect processing.
- Collisions: The number of collisions sensed on the *EtherNet/IP Option Card CM092*.
- Tx Retry: Transmit Retries: The number of transmit retries on the *EtherNet/IP Option Card CM092* due to media collisions or non granted access to the media.
- Consumed Message Cnt: The number of consumed messages.
- Produced Message Cnt: The number of produced messages.
- Reset Statistics Button: Reset counters.

## Drive Diagnostics Web Page

The drive diagnostics page contains the standard header and footer along with diagnostic information specific to the current drive.

The screenshot shows a Microsoft Internet Explorer window displaying the 'Yaskawa SI-E Ethernet Option - Drive Diagnostics' page. The address bar shows the URL <http://192.168.1.20/dDiagnostics.htm>. The page header includes the Yaskawa logo and navigation links for File, Edit, View, Favorites, Tools, and Help. The main content area displays various drive parameters:

Parameter	Value	Parameter	Value	Parameter	Value		
PN: CM092		Output Freq:	0.00 Hz	Output Current:	0.00 Amps		
Drive: CIMR-G7C-20P4-S22016		Output Volts:	0.0 Volts	DC Bus Volts:	246 Volts		
Protocol: EtherNet/IP		Torque Ref:	0.0 %	Elapsed Time:	0 Hours		
Serial Number: 0x082001DB		Term A2 Level:	22.3 %	Term A3 Level:	0.0 %		
		Input Term Sts:	0,0,0,0,0,0,0,0,1,0	Output Term Sts:	0,1,0	Term A1 Level:	0.0 %
		Drive Run Status:	STOP	Drive Ready Status:	READY	Drive Fault Status:	NO FAULT

At the bottom of the page, there are links for Network Diagnostics, Help Drive, Help Option, Main, Waukegan, IL 60085, and Web: <http://www.yaskawa.com>. The copyright notice reads "Copyright © 2006 Yaskawa Electric America, Inc." and "All rights reserved".

Drive Diagnostics Web Page

- Freq Ref: Frequency Reference – Monitor Parameter U1-01.
- Motor Speed: Motor Speed – Monitor Parameter U1-05.
- Output Power: Output Power – Monitor Parameter U1-08.
- PID Feedback: PID Feedback in %
- Input Terminal Sts: The Digital Input status as bit field – Monitor Parameter U1-10.
- Drive Run Status: Indicates RUN/STOP state of the drive.
- Output Freq: Output Frequency – Monitor Parameter U1-02.
- Output Volts: Output Voltage – Monitor Parameter U1-06.
- Torque Ref: Torque Reference – Monitor Parameter U1-09.
- Term A2 Level: The analog input A1 Terminal A2 (14) monitor value U1-16.
- Output Terminal Sts: Digital Output status as bit field – Monitor Parameter U1-11.
- Drive Ready Status: Indicates the drive READY status.
- Output Current: Output Current – Monitor Parameter U1-03.
- DC Bus Volts: DC bus Voltage – Monitor Parameter U1-07.
- Elapsed Time: Elapsed Time – Monitor Parameter U1-13.
- Term A3 Level: The analog input Terminal A3 (16) monitor value U1-17.
- Term A1 Level: The analog input Terminal A1 monitor value U1-15.
- Drive Fault Status: Indicates drive FAULT status.

## Drive Setup

- Remove power from the drive and wait for the charge lamp to be completely extinguished. Wait at least five additional minutes for the drive to be completely discharged. Measure the DC BUS voltage and verify that it is at a safe level.
- Reinstall all drive covers and the operator keypad. Apply power to the drive.
- Set parameters b3-01 and b3-02 to their appropriate values. Refer to the table to the right for available b3-01 and b3-02 values.

Param	Function	Data	+/- Limits – Description	Default
b3-01	Reference Selection	0	Digital Operator	1
		1	Terminals	
		2	Serial Communication	
		3	<b>Option PCB (EtherNet/IP Option Card CM092)</b>	
		4	Pulse Input (F7 and G7 Only)	
b3-02	Operation Method Selection	0	Digital Operator	1
		1	Terminals	
		2	Serial Communication	
		3	<b>Option PCB (EtherNet/IP Option Card CM092)</b>	

## Important Network Information

- It is strongly recommended that shielded CAT-5 cable be used for all network cables.
- A maximum of 10 simultaneous connections are allowed.
- The EtherNet I/P connection must be refreshed within 60 seconds. If it is not refreshed within 60 seconds, the connection will be closed.
- Refer to the appropriate programming or parameter access manual for a complete list of drive parameters available. A list of applicable manuals is available at the end of this document.

## EDS Files

### Installing the appropriate EDS file

The EDS files can be found on the CD supplied with the drive or can be downloaded from [www.yaskawa.com](http://www.yaskawa.com).

Select “Downloads”, “Browse”, “By Inverter Drives” and “By Product”.

Then select “Network Communications Options” and the appropriate EDS file of the latest version from those listed.

The EDS files are “zip” files. Each “zip” file contains the EDS files for the entire drive family for the listed revision. The “zip” file is named “EDS\_Drive Model\_UTC000068\_File Version.zip”.

Example: The current file containing all of the F7U EDS files is named EDS\_F7U\_UTC000068\_V1\_01.zip.

Extract the appropriate EDS file for the drive model. The current CIMR-F7U20P4 drive EDS file is named *F7U20P4\_UTC000068\_V1\_01.eds*

# Drive Fault Messages

## □ Drive EtherNet/IP Fault Messages

The table of *EtherNet/IP Option Card CM092* fault codes returned by the drive is shown below. Refer to the appropriate drive user and/or programming manual(s) for drive specific information on the fault returned.

Fault Code Conversion

Drive Fault Code [hex]	EtherNet/IP Fault Code [hex]	Description	Drive Fault Code [hex]	EtherNet/IP Fault Code [hex]	Description
0h	0000h	None	16h	9000h	External Fault 8 (EF8)
1h	5120h	DC Bus Fuse Open (PUF)	18h	7310h	Overspeed Detection (OS)
2h	3220h	DC Bus Undervoltage (UV1)	19h	7310h	Speed Deviation (DEV)
3h	5110h	CTL PS Undervoltage (UV2)	1Ah	7301h	PG Open (PGO)
4h	3222h	MC Answerback (UV3)	1Bh	3130h	Input Phase Loss (PF)
5h	2130h	Short Circuit (SC)	1Ch	3130h	Output Phase Loss (LF)
6h	2120h	Ground Fault (GF)	1Eh	5300h	Operator Disconnected (OPR)
7h	2300h	Overcurrent (OC)	1Eh	5300h	OPE Faults
8h	3210h	DC Bus Overvoltage (OV)	1Fh	6320h	EEPROM R/W Error (ERR)
9h	4200h	Heatsink Over-temperature (OH)	21h	7500h	EtherNet/IP Communication Error (BUS)
0Ah	4210h	Heatsink Maximum Temperature (OH1)	22h	7500h	SI-E Communications Error
0Bh	2220h	Motor Overload (OL1)	23h	7500h	SI-F/G Communications Error
0Ch	2200h	Inverter Overload (OL2)	24h	7500h	SI-F/G CPU error
0Dh	2221h	Overtorque Detection 1 (OL3)	25h	8321h	Out of Control (CF)
0Eh	2222h	Overtorque Detection 2 (OL4)	26h	8313h	Zero Servo Fault (SVE)
0Fh	7110h	Dynamic Braking Transistor (RR)	27h	9000h	External Fault 0 (EF0)
10h	7112h	Dynamic Braking Resistor (RH)	28h	2310h	High Slip Braking (OL7)
11h	9000h	External Fault 3 (EF3)	29h	8321h	Undertorque Detection 1 (UL3)
12h	9000h	External Fault 4 (EF4)	2Ah	8321h	Undertorque Detection 2 (UL4)
13h	9000h	External Fault 5 (EF5)	2Bh	8110h	Feedback Loss (FBL)
14h	9000h	External Fault 6 (EF6)	2Ch	4300h	Motor Overheat 1 (OH3)
15h	9000h	External Fault 7 (EF7)	2Dh	4310h	Motor Overheat 2 (OH4)

## ■ Drive Fault Operator Messages

The following is a table of faults that could be caused by the *EtherNet/IP Option Card CM092* that will display on the operator keypad only. For any fault displayed on the operator that is not listed in the following table, please see the appropriate drive technical manual.

Drive Faults (Displayed on the Drive Keypad)			
Fault	Content	Cause	Solution
BUS	EtherNet/IP Option Card CM092 communications error.	Communication is not established between EtherNet/IP Master and the drive.	<ul style="list-style-type: none"> <li>• Check EtherNet/IP Option Card CM092 communication LED display.</li> </ul>
EF0	EtherNet/IP Option Card CM092 external fault.	Drive received an external fault command from the EtherNet/IP Option Card CM092	<ul style="list-style-type: none"> <li>• Check multi-function input settings</li> <li>• Check PLC or controller program</li> <li>• Eliminate cause of fault (machine device in fault state)</li> </ul>
OPE05	Command selection fault.	Parameter b3-01 is set to EtherNet/IP Option Card CM092 and no card is detected.	<ul style="list-style-type: none"> <li>• Install EtherNet/IP Option Card CM092</li> <li>• Reprogram b3-01</li> <li>• Replace the EtherNet/IP Option Card CM092</li> </ul>
OPE06	Reference selection fault.	Parameter b3-02 is set to EtherNet/IP Option Card CM092 and no card is detected.	<ul style="list-style-type: none"> <li>• Install EtherNet/IP Option Card CM092</li> <li>• Reprogram b3-02</li> <li>• Replace the EtherNet/IP Option Card CM092</li> </ul>
CPF20	EtherNet/IP Option Card CM092 fault.	Faulty J1/2CN connection.	<ul style="list-style-type: none"> <li>• Power cycle the drive</li> <li>• Reseat the EtherNet/IP Option Card CM092</li> <li>• Replace the EtherNet/IP Option Card CM092</li> <li>• Replace the inverter</li> </ul>
CPF21	EtherNet/IP Option Card CM092 self-diagnostics fault.	Faulty EtherNet/IP Option Card CM092.	<ul style="list-style-type: none"> <li>• Replace the EtherNet/IP Option Card CM092</li> </ul>
CPF22	EtherNet/IP Option Card CM092 ID code fault.	Faulty EtherNet/IP Option Card CM092.	<ul style="list-style-type: none"> <li>• Replace the EtherNet/IP Option Card CM092</li> </ul>
CPF23	Watch dog timer fault.	Faulty EtherNet/IP Option Card CM092.	<ul style="list-style-type: none"> <li>• Replace the EtherNet/IP Option Card CM092</li> </ul>

# Chapter 3 EtherNet/IP Supported Objects

This section describes the EtherNet/IP Option Card CM092 supported objects.

## Supported Input Instances

Basic Speed Control Input Instance 20 (14h)

Input	Byte	Bit 7	Bit 6	Bit 5	Bit 4	Bit 3	Bit 2	Bit 1	Bit 0
Instance	0	-	-	-	-	-	Fault Reset	-	Run Forward
	1								
20	2								
	3								

Run Forward: Forward RUN Command

Fault Reset: Fault Reset Command

Speed reference: RPM when o1-03 = (2 ~ 39)

Extended Speed Control Input Instance 21 (15h)

Input	Byte	Bit 7	Bit 6	Bit 5	Bit 4	Bit 3	Bit 2	Bit 1	Bit 0
Instance	0	-	Net Reference	Net Control	-	-	Fault Reset	Run Reverse	Run Forward
	1								
21	2								
	3								

Run Forward: Forward RUN Command

Run Reverse: Reverse RUN Command

Fault Reset: Fault Reset Command

Net Control: Parameter b3-02

0 – 1 transition sets b3-02 = 3

1 – 0 transition sets b3-02 to previous value

Net Reference: Parameter b3-01

0 – 1 transition sets b3-01 = 3

1 – 0 transition sets b3-01 to previous value

Speed Reference: RPM when o1-03 = (2 ~ 39)

### Basic Speed/Torque Control Input Instance 22 (16h)

Input	Byte	Bit 7	Bit 6	Bit 5	Bit 4	Bit 3	Bit 2	Bit 1	Bit 0
Instance	0	-	-	-	-	-	Fault Reset	-	Run Forward
22	1						-		
	2								Speed Reference1 (Low Byte) [scaled by parameter o1-03]
	3								Speed Reference1 (High Byte) [scaled by parameter o1-03]
	4								Torque Reference2 (Low Byte) [0.1%]
	5								Torque Reference2 (High Byte) [0.1%]

Note: 1: Becomes torque limit in torque mode

2: VG+ Series 3 FVC mode only

Run Forward: Forward RUN Command

Run Reverse: Reverse RUN Command

Fault Reset: Fault Reset Command

Speed Reference: RPM when o1-03 = (2 ~ 39)

Torque Reference: Percent of rated torque - (VG+ Series 3 Closed-loop flux vector mode (FVC) only)

### Basic Speed/Torque Control Input Instance 23 (16h)

Input	Byte	Bit 7	Bit 6	Bit 5	Bit 4	Bit 3	Bit 2	Bit 1	Bit 0
Instance	0	-	Net Reference	Net Control	-	-	Fault Reset	Run Reverse	Run Forward
23	1						-		
	2								Speed Reference1 (Low Byte) [scaled by parameter o1-03]
	3								Speed Reference1 (High Byte) [scaled by parameter o1-03]
	4								Torque Reference2 (Low Byte) [0.1%]
	5								Torque Reference2 (High Byte) [0.1%]

Note: 1: Becomes torque limit in torque mode

2: VG+ Series 3 FVC mode only

Run Forward: Forward RUN Command

Run Reverse: Reverse RUN Command

Fault Reset: Fault Reset Command

Net Control: Parameter b3-02

0 – 1 transition sets b3-02 = 3

1 – 0 transition sets b3-02 to previous value

Net Reference: Parameter b3-01

0 – 1 transition sets b3-01 = 3

1 – 0 transition sets b3-01 to previous value

Speed Reference: RPM when o1-03 = (2 ~ 39)

Torque Reference: Percent of rated torque - (VG+ Series 3 Closed-loop flux vector mode (FVC) only)

## Magnetek Input Instances

Magnetek Standard Speed/Torque Control Input Instance 101 (65h)

Input	Byte	Bit 7	Bit 6	Bit 5	Bit 4	Bit 3	Bit 2	Bit 1	Bit 0
Instance	0	Terminal S8	Terminal S7	Terminal S6	Terminal S5	Terminal S4	Terminal S3	Run Reverse	Run Forward
	1	External Base Block	Fault Log Clear	-	-	-	-	Fault Reset	External Fault
101	2	Speed Reference1 (Low Byte) [scaled by parameter o1-03]							
	3	Speed Reference1 (High Byte) [scaled by parameter o1-03]							
	4	Torque Reference2 (Low Byte) [0.1%]							
	5	Torque Reference2 (High Byte) [0.1%]							
	6	Torque Compensation2 (Low Byte) [0.1%]							
	7	Torque Compensation2 (High Byte) [0.1%]							

Note: 1: Becomes torque limit in torque mode

2: VG+ Series 3 FVC mode only

Run Forward: Forward RUN Command

Run Reverse: Reverse RUN Command

Terminal S3: Multi-function Digital Input 1 (H1-01)

Terminal S4: Multi-function Digital Input 2 (H1-02)

Terminal S5: Multi-function Digital Input 3 (H1-03)

Terminal S6: Multi-function Digital Input 4 (H1-04)

Terminal S7: Multi-function Digital Input 5 (H1-05)

Terminal S8: Multi-function Digital Input 6 (H1-06)

External Fault: External Fault (Setting of H1-01 ~ H1-06)

Fault Reset: Fault Reset Command

Terminal M1-M2: Multi-function Digital Output 1 (H2-01)

Terminal P1: Multi-function Digital Output 2 (H2-02)

Terminal P2: Multi-function Digital Output 3 (H2-03)

Speed Reference: RPM when o1-03 = (2 ~ 39)

Torque Reference: Percent of rated torque - (VG+ Series 3 Closed-loop flux vector mode (FVC) only)

Torque Compensation: Percent of rated torque - (VG+ Series 3 Closed-loop flux vector mode (FVC) only)

Magnetek Standard Speed/Torque Control Input Instance 115 (73h)

Input	Byte	Bit 7	Bit 6	Bit 5	Bit 4	Bit 3	Bit 2	Bit 1	Bit 0
Instance	0	Terminal S8	Terminal S7	Terminal S6	Terminal S5	Terminal S4	Terminal S3	Run Reverse	Run Forward
115	1	External Base Block	Fault Log Clear	-	-	-	-	Fault Reset	External Fault
	2	Speed Reference1 (Low Byte) [scaled by parameter o1-03]							
	3	Speed Reference1 (High Byte) [scaled by parameter o1-03]							
	4	Torque Reference2 (Low Byte) [0.1%]							
	5	Torque Reference2 (High Byte) [0.1%]							
	6	Torque Compensation2 (Low Byte) [0.1%]							
	7	Torque Compensation2 (High Byte) [0.1%]							
	8	Not Used							
	9	Not Used							
	10 (0Ah)	Not Used							
	11 (0Bh)	Not Used							
	12 (0Ch)	Terminal A1 (Low Byte)							
	13 (0Dh)	Terminal A1 (High Byte)							
	14 (0Eh)	Terminal A2 (Low Byte)							
	15 (0Fh)	Terminal A2 (High Byte)							
	16 (10h)	Digital Output (Low Byte)							
	17 (11h)	Digital Output (High Byte)							
	18 (12h) – 39 (27h)	Not Used							

Note: 1: Becomes torque limit in torque mode

2: VG+ Series 3 FVC mode only

Run Forward: Forward RUN Command

Run Reverse: Reverse RUN Command

Terminal S3: Multi-function Digital Input 1 (H1-01)

Terminal S4: Multi-function Digital Input 2 (H1-02)

Terminal S5: Multi-function Digital Input 3 (H1-03)

Terminal S6: Multi-function Digital Input 4 (H1-04)

Terminal S7: Multi-function Digital Input 5 (H1-05)

Terminal S8: Multi-function Digital Input 6 (H1-06)

External Fault: External Fault (Setting of H1-01 ~ H1-06)

Fault Reset: Fault Reset Command

Terminal M1-M2: Multi-function Digital Output 1 (H2-01)

Terminal P1: Multi-function Digital Output 2 (H2-02)

Terminal P2: Multi-function Digital Output 3 (H2-03)

Speed Reference: RPM when o1-03 = (2 ~ 39)

Torque Reference: Percent of rated torque - (VG+ Series 3 Closed-loop flux vector mode (FVC) only)

Torque Compensation: Percent of rated torque - (VG+ Series 3 Closed-loop flux vector mode (FVC) only)

Terminal A1: Analog Input 1 (H3-04)

Terminal A2: Analog Input 2 (H3-08)

Digital Output: Digital Output as bit field

## Supported Output Instances

Basic Speed Control Output Instance 70 (46h)

Output	Byte	Bit 7	Bit 6	Bit 5	Bit 4	Bit 3	Bit 2	Bit 1	Bit 0
Instance	0	-	-	-	-	-	Running 1 (FWD)	-	Faulted
70	1					-			
	2					Speed Actual (Low Byte) [scaled by parameter o1-03]			
	3					Speed Actual (High Byte) [scaled by parameter o1-03]			

Faulted: Drive Fault

Running1 (Forward): Running in forward direction

Speed Actual: RPM if o1-03 = (2 ~ 39)

Extended Speed Control Output Instance 71 (47h)

Output	Byte	Bit 7	Bit 6	Bit 5	Bit 4	Bit 3	Bit 2	Bit 1	Bit 0
Instance	0	At Speed	Reference from Net	Control from Net	Ready	Running 2 (REV)	Running 1 (FWD)	Warning	Faulted
71	1					-			
	2					Speed Actual (Low Byte) [scaled by parameter o1-03]			
	3					Speed Actual (High Byte) [scaled by parameter o1-03]			

Faulted: Drive Fault

Warning: Drive Alarm

Running1 (FWD): Running in forward direction

Running1 (REV): Running in reverse direction

Ready: Drive Ready

Control from Net:

0 = Non-network control

1 = Control from network

Reference from Net:

0 = Reference not from network

1 = Reference from network

At Speed: Speed Agree

Speed Actual: RPM if o1-03 = (2 ~ 39)

Basic Speed/Torque Control Output Instance 72 (48h)

Output	Byte	Bit 7	Bit 6	Bit 5	Bit 4	Bit 3	Bit 2	Bit 1	Bit 0
Instance	0	At Speed	Reference from Net	Control from Net	Ready	Running 2 (REV)	Running 1 (FWD)	Warning	Faulted
72	1					-			
	2					Speed Actual (Low Byte) [scaled by parameter o1-03]			
	3					Speed Actual (High Byte) [scaled by parameter o1-03]			
	4					Torque Actual1 (Low Byte) [0.1%]			
	5					Torque Actual1 (High Byte) [0.1%]			

Note: 1 VG+ Series 3 FVC mode only

Running1 (Forward): Running in forward direction

Speed Actual: RPM if o1-03 = (2 ~ 39)

Torque Actual: Percent of rated torque

Extended Speed/Torque Control Output Instance 73 (49h)

Output	Byte	Bit 7	Bit 6	Bit 5	Bit 4	Bit 3	Bit 2	Bit 1	Bit 0
Instance	0	-	-	-	-	-	Fault Reset	-	Run Forward
73	1	-	-	-	-	-	-	-	-
	2	-	-	-	-	-	-	-	Speed Actual (Low Byte) [scaled by parameter o1-03]
	3	-	-	-	-	-	-	-	Speed Actual (High Byte) [scaled by parameter o1-03]
	4	-	-	-	-	-	-	-	Torque Actual1 (Low Byte) [0.1%]
	5	-	-	-	-	-	-	-	Torque Actual1 (High Byte) [0.1%]

Note: 1 VG+ Series 3 FVC mode only

Faulted: Drive Fault

Warning: Drive Alarm

Running1 (Forward): Running in forward direction

Running1 (Reverse): Running in reverse direction

Ready: Drive Ready

Control from Net:

0 = Non-network control

1 = Control from network

Reference from Net:

0 = Reference not from network

1 = Reference from network

At Speed: Speed Agree

Speed Actual: RPM if o1-03 = (2 ~ 39)

Torque Actual: Percent of rated torque

## Magnetek Output Instances

Magnetek Standard Speed/Torque Output Instance 151 (97h)

Output	Byte	Bit 7	Bit 6	Bit 5	Bit 4	Bit 3	Bit 2	Bit 1	Bit 0
Instance	0	FAULT	ALARM	READY	SPEED AGREE	RESET	RUNNING REVERSE	ZSP	RUNNING FORWARD
	1	ZSV	MOTOR 2 SELECTED	MULTI-FUNCTION OUTPUT 3	MULTI-FUNCTION OUTPUT 2	MULTI-FUNCTION OUTPUT 1	LOCAL / REMOTE	UV	OPE
151	2	Output Frequency (Low Byte) [scaled by parameter o1-03]							
	3	Output Frequency (High Byte) [scaled by parameter o1-03]							
	4	Torque Reference1 (Low Byte) [0.1%]							
	5	Torque Reference1 (High Byte) [0.1%]							
	6	Output Current (Low Byte) [0.1A or 0.01A]							
	7	Output Current (High Byte) [0.1A or 0.01A]							

Note: 1 VG+ Series 3 FVC mode only

Running (Forward): Running in forward direction

ZSP: At Zero Speed

Running (Reverse): Running in reverse direction

Reset: Fault reset

Speed Agree: @ commanded speed

Ready: Drive Ready

Alarm: Drive Alarm

Fault: Drive Fault

OPE: Drive OPE Fault

UV: Drive Undervoltage Fault

Local/Remote:

0 = Drive is in Local Control

1 = Drive is in Remote Control

Terminal M0-M1: Multi-function Digital Output 1 (H2-01)

Terminal M2-M3,M2-M4: Multi-function Digital Output 2 (H2-02)

Terminal M5-M6: Multi-function Digital Output 3 (H2-03)

ZSV: Zero Servo (FVG+ Series 3 in Closed-loop flux vector mode (FVC) only)

Output Frequency: Output frequency of the drive

Torque Reference: Percent of rated torque

Output Current: Parameter o2-04 for kVA model - Scaling is 0.01A for kVA models 00h ~ 06h and 20h ~ 26h

Magnetek High Speed/Torque Status Output Instance 155 (9Bh)

Output	Byte	Bit 7	Bit 6	Bit 5	Bit 4	Bit 3	Bit 2	Bit 1	Bit 0	
Instance	0	FAULT	ALARM	READY	SPEED AGREE	RESET	RUNNING REVERSE	ZSP	RUNNING FORWARD	
	1	ZSV	MOTOR 2 SELECTED	MULTI-FUNCTION OUTPUT 3	MULTI-FUNCTION OUTPUT 2	MULTI-FUNCTION OUTPUT 1	LOCAL / REMOTE	UV	OPE	
155	2	Output Speed (Low Byte) [scaled by parameter o1-03]							Monitor Parameter U1-05	
	3	Output Speed (High Byte) [scaled by parameter o1-03]								
	4	Torque Reference1 (Low Byte) [0.1%]							Monitor Parameter U1-09	
	5	Torque Reference1 (High Byte) [0.1%]								
	6	PG Count Value (PG-X2) (Low Byte)							Encoder pulse count from PG-X2 option when in flux vector mode. There is no associated drive parameter.	
	7	PG Count Value (PG-X2) (High Byte)								
	8	Frequency Command (Low Byte) [scaled by parameter o1-03]							Monitor Parameter U1-01	
	9	Frequency Command (High Byte) [scaled by parameter o1-03]								
	10 (0Ah)	Output Frequency (Low Byte) [scaled by parameter o1-03]							Monitor Parameter U1-02	
	11 (0Bh)	Output Frequency (High Byte) [scaled by parameter o1-03]								
	12 (0Ch)	Output Current (Low Byte) [0.1A or 0.01A]							Monitor Parameter U1-03	
	13 (0Dh)	Output Current (High Byte) [0.1A or 0.01A]								
	14 (0Eh)	Inverter Terminal A2 Output (Low Byte)							Monitor Parameter U1-16 Terminal A2	
	15 (0Fh)	Inverter Terminal A2 Output (High Byte)								
	16 (10h)	Main Circuit DC Voltage (Low Byte)							Monitor Parameter U1-07	
	17 (11h)	Main Circuit DC Voltage (High Byte)								
	18 (12h)	Error Alarm Signal 1 (Low Byte)							For details refer to the following section:	
	19 (13h)	Error Alarm Signal 1 (High Byte)								
	20 (14h)	Error Alarm Signal 2 (Low Byte)								
	21 (15h)	Error Alarm Signal 2 (High Byte)								
	22 (16h)	Error Alarm Signal 3 (Low Byte)								
	23 (17h)	Error Alarm Signal 3 (High Byte)							Monitor Parameter U1-17 Terminal A3	
	24 (18h)	Inverter Terminal A3 Input (Low Byte)								
	25 (19h)	Inverter Terminal A3 Input (High Byte)								
	26 (1Ah)	Inverter Terminals S1~S8 Input (Low Byte)							Monitor Parameter U1-10 VG+ Series 3 and G+ Series 3 Terminals S1-S8	
	27 (1Bh)	Inverter Terminals S1~S8 Input (High Byte)								
	28 (1Ch)	Inverter Terminal A1 Input (Low Byte)							Monitor Parameter U1-15 Terminal A1	
	29 (1Dh)	Inverter Terminal A1 Input (High Byte)								
	30 (1Eh)	PG Counter (Ch2) (PG-W2) (Low Byte)							Encoder pulse count from PG-W2 option when in flux vector mode. Speed detection PG counter value.	
	31 (1Fh)	PG Counter (Ch2) (PG-W2) (High Byte)								
	32 (20h) - 39 (29h)	Not Used								

## Magnetek High Speed/Torque Status Output Instance 155 (9Bh) - Word Details

Running Forward: Running in the forward direction ZSP: At Zero Speed Running Reverse: Running in the reverse direction Reset: Fault Reset Speed Agree: @ Commanded Speed Ready: Drive Ready Alarm: Drive Alarm Fault: Drive Fault OPE: Drive OPE Fault UV: Drive Undervoltage Fault Local/Remote: 0 = Drive is in Local Control 1 = Drive is in Remote Control Terminal M0-M1: Multi-function Digital Output 1 (H2-01) Terminal M2-M3,M2-M4: Multi-function Digital Output 2 (H2-02) Terminal M5-M6: Multi-function Digital Output 3 (H2-03) ZSV: Zero Servo (FVG+ Series 3 in Closed-loop flux vector mode (FVC) only)	Output Speed: RPM if o1-03 = (2 ~ 39) Torque Reference: Percent of Rated torque PG Count Value: PG-X2 pulse count Frequency Command: Frequency command Output Frequency: Output frequency of the drive Output Current: Parameter o2-04 for kVA model - Scaling is 0.01A for kVA models 00h ~ 06h and 20h ~ 26h Inverter Terminal A2 Input: Analog Input 2 Main Circuit DC Voltage: Monitor Parameter U1-07 Error Alarm Signal 1: Refer to: (Details for bytes 10 through 23, Error Alarm Signals 1, 2, and 3) Error Alarm Signal 2: Alarm Signals 1, 2, and 3 Error Alarm Signal 3: Inverter Terminal A3 Input: Analog Input 3 Inverter Terminals S1~S8 Input: Digital Inputs as bit field (Terminals S1-S7) Inverter Terminal A1 Input: Analog Input 1 PG Counter (Ch2): Encoder pulse count from PG-W2 option.

## Magnetek High Speed/Torque Status Output Instance 155 (9Bh)

(Details for bytes 10 through 23, Error Alarm Signals 1, 2, and 3)

Bytes 18(Low) and 19(High) – Error Alarm Signal 1		Bytes 20(Low) and 21(High) – Error Alarm Signal 2		Bytes 22(Low) and 23(High) – Error Alarm Signal 3	
Bit	Fault	Bit	Fault	Bit	Fault
0h	PUF DC Bus Fuse Open	0h	EF3 External Fault - Terminal S3	0h	CE Modbus Communication Error
1h	UV1 DC Bus Undervoltage	1h	EF4 External Fault - Terminal S4	1h	BUS Bus Fault
2h	UV2 Control Circuit Undervoltage	2h	EF5 External Fault - Terminal S5	2h	Not Used
3h	UV3 Main Circuit Contactor Answerback Fault	3h	EF6 External Fault - Terminal S6	3h	Not Used
4h	Not Used	4h	EF7 External Fault - Terminal S7	4h	CF Out of Control Fault No Determination of Motor Speed
5h	GF Ground Fault	5h	EF8 External Fault - Terminal S8	5h	SVE Zero Servo Fault (VG+ Series in Closed-loop flux vector mode (FVC) only)
6h	OC Overcurrent Fault	6h	FAN Drive Cooling Fan Fault (models with internal cooling fans only)	6h	EF0 External Communications Fault
7h	OV Overvoltage Fault	7h	OS Overspeed Fault	7h	Not Used
8h	OH Heatsink Over temperature Fault	8h	DEV Speed Deviation Fault	8h	Not Used
9h	OH1 Drive Overheat Fault	9h	PGO PG Open, Encoder (Pulse Generator open circuit)	9h	Not Used
Ah	OL1 Motor Overload Fault	Ah	PF Input Phase Loss Fault	Ah	Not Used
Bh	OL2 Drive Overload Fault	Bh	LF Output Phase Loss	Bh	Not Used
Ch	OL3 Overtorque Fault 1 (L6-02)	Ch	Not Used	Ch	Not Used
Dh	OL4 Overtorque Fault 2 (L6-05)	Dh	OPR Operator Disconnected	Dh	Not Used
Eh	RR Dynamic Braking Transistor Failure	Eh	ERR EPROM R/W Error	Eh	Not Used
Fh	RH Dynamic Braking Resistor Overheat	Fh	Not Used	Fh	CPF Control Circuit Fault/Peripheral Fault

# CIP Supported Objects

## Class 01h – Identity Object

Service Code No. (hex)	Service Name
01h	Get Attribute All
05h	RESET
0Eh	Get Attribute Single

Attributes

Instance ID (Hex)	Attribute (Hex)	Description	Get	Set	Size	Default Value
00h	01h	Object Software Revision	X		Word	1
	02h	Maximum Instances	X		Word	1
01h	01h	Vendor ID	X		Word	44 (YASKAWA)
	02h	Device Type	X		Word	2 (AC drives)
	03h	Product Code	X		Word	Product/Model Dependant Code- <i>For factory use Refer to Attribute 7-Product Name</i> , for drive family and model.
	04h	Revision	X		Word	Software Dependant
	05h	Status	X		Word	0
	06h	Serial Number	X		Word	Each product's serial number is unique Range is 0x8200000 ~0x82FFFFF
	07h	Product Name	X		(14 Bytes)	Product Dependant*

- The product name is CIMR-[Drive Family][Drive Model].

## Class 06h – Connection Manager Object

Service Code No. (hex)	Service Name
0E	Get Attribute Single

Attributes

Instance ID (Hex)	Attribute (Hex)	Description	Get	Set	Size	Default Value
00h	01h	Object Software Revision	X		Word	1

## Class 02h – Messenger Router Object

Service Code No. (hex)	Service Name
0Eh	Get Attribute Single

Attributes

Instance ID(Hex)	Attribute (Hex)	Description	Get	Set	Size	Default Value
0h	01h	Object Software Revision	X		Word	1

## Class 01h – Assembly Object

Service Code No. (hex)	Service Name
0Eh	Get Attribute Single
10h	Set Attribute Single

Attributes

Instance ID	Attrib ute (Hex)	Description	Get	Set	Size	Default Value
00h	01h	Object Software Revision	X		Word	1
14h	03h	Data	X	X	Array 4 Bytes	00 00 00 00
15h	03h	Data	X	X	Array 4 Bytes	00 00 00 00

73h	03h	Data	X	X	Array 40 Bytes	00 00 00 00 00 00 00 00 00 00 00 00 00 00 00 00
97h	03h	Data	X	-	Array 8 Bytes	00 00 00 00 00 00 00
9Bh	03h	Data	X	-	Array 40 Bytes	00 00 00 00 00 00 00 00 00 00 00 00 00 00 00 00

## Class F5– TCP/IP

Service Code No. (hex)	Service Name
01h	Get Attribute All
0Eh	Get Attribute Single
10h	Set Attribute Single

### Attributes

Instance ID	Attribute (Hex)	Description	Get	Set	Size	Default Value
00h	01h	Object Software Revision	X		Word	1
	02h	Maximum Instances	X	-	Word	1
01h	01h	Status	X		Long	Bit 0: Not configured Bit 1: Configured Bit 2~31: Reserved
	02h	Configuration Capability	X		Long	Bit 0: BootP Client Bit 1: DHCP Client Bit 2: DNS Client Bit 3: DHCP-DNS update Bit 4: Configuration Settable Bit 5~31: Reserved
	03h	Configuration Control	X	X	Long	Bit 0~3: Start up Configuration Bit 4: DNS Enable Bit 5~31: Reserved
	04h	Physical Link	X	-	Struct	Path (Word): EPATH
	05h	Interface Configuration	X	X	Struct	IP Address (Long) Subnet Mask (Long) Gateway (Long) Name Server 1 (Long) Name Server 2 (Long) Domain Name (String)

## Class F6– EtherNet Link Object

Service Code No. (hex)	Service Name
01h	Get Attribute All
0Eh	Get Attribute Single
10h	Set Attribute Single
4Ch	Get and Clear

### Attributes

Instance ID (Hex)	Attribute (Hex)	Description	Get	Set	Size	Default Value
00h	01h	Object Software Revision	X	-	Word	1
	02h	Maximum Instances	X		Word	1
01h	01h	Interface Speed	X		Long	10
	02h	Interface Flags	X		Long	Bit 0: BootP Client Bit 1: DHCP Client Bit 2: DNS Client Bit 3: DHCP-DNS update Bit 4: Configuration Settable Bit 5~31: Reserved
	03h	Configuration Control	X	X	Long	Bit 0: Link Status Bit 1: 0; Half Duplex 1: Full Duplex Bit 2 ~ 31: Reserved
	04h	Physical Address (MAC ID)	X		Array 6 Word s	Unique per assembly
	05h	Interface Control	X	X	Struct	Control Bits: Word Forced Int Speed: Word

## Class 29h – Control Supervisor Object

Service Code No. (hex)	Service Name
0Eh	Get Attribute Single
10h	Set Attribute Single
05h	RESET

### Attributes

Instance ID	Attribute	Description	Get	Set	Size	Default Value
00h	01h	Object Software Revision	X	-	Word	1
	03h	Run 1 (Forward Run)	X	X	Byte	Forward Run Command
	04h	Run 2 (Reverse Run)	X	X	Byte	Reverse Run Command
	05h	Net Control	X	X	Byte	Net Control Command - Parameter b3-02
	06h	State	X	-	Byte	Inverter Status
	07h	Running 1 (Forward)	X	-	Byte	Forward Running
	08h	Running 2 (Reverse)	X	-	Byte	Reverse Running
	09h	Ready	X	-	Byte	Inverter Ready
	0Ah	Faulted	X	-	Byte	Inverter Fault
	0Bh	Warning	X	-	Byte	Inverter Alarm
	0Ch	Fault Reset	X	X		Fault Reset
	0Dh	Fault Code	X	-	Word	Current Fault
	0Eh	Warn Code	X	-	Word	Current Warning
	0Fh	Control from Net	X	-	Byte	Net Control Status - Parameter b3-02
01h	10h	CIP Fault Mode	X	-	Byte	Always “2”
	11h	Force Fault	X	X	Byte	External Fault - EF0
	12h	Force Status	X	-	Byte	External Fault Status – EF0

Note: See Fault Code Conversions Table for fault description.

## Class 2Ah – AC Dive Object

Service Code No. (hex)	Service Name
0Eh	Get Attribute Single
10h	Set Attribute Single

### Attributes

Instance ID (Hex)	Attribute	Description	Get	Set	Size	Default Value
00h	01h	Object Software Revision	X	-	Word	1

# Parameter Tables

## Class/Instance/Attribute Tables

The following tables list all the drive monitors and parameters that are supported by the CM092 *EtherNet/IP Option Card CM092*. Each drive has its own set of Classes (CLASS), Instances (INST), and Attributes (ATTR) for each monitor and parameter.

## Drive Parameter Attributes (U1-xx / Monitor Only)

### Class 66h, Instance 1 – Monitor Parameters 1

Monitor parameters all share the same service (GET), data type (Word) and number of bytes (2)

ATTRIBUTES (in hex)	PARAMETER	PARAMETER FUNCTION	PARAMETER SETTING	BIT NO.	LIMITS / DESCRIPTION
41h	U1-01	Frequency Reference			Frequency Reference of drive (0.1 Hz) (1)
42h	U1-02	Output Frequency			Output Frequency of drive (0.1 Hz) (1)
43h	U1-03	Output Current			10V/Drive rated current (2)
44h	U1-04	Control Method	0		V/f Control
			1		V/f with PG Feedback
			2		Open Loop Vector
			3		Flux Vector
45h	U1-05	Motor Speed			Motor Speed (in 0.1 Hz)
46h	U1-06	Output Voltage			Output Voltage (in 0.1 V)
47h	U1-07	DC Bus Voltage			DC Bus Voltage (in 1 V)
48h	U1-08	Output Power			Output Power (in 0.1 kW)
49h	U1-09	Torque Reference			Torque Reference (in 0.1%)
4Ah	U1-10	Input Terminal Status	0		Input Terminal 1 closed
			1		Input Terminal 2 closed
			2		Input Terminal 3 closed
			3		Input Terminal 4 closed
			4		Input Terminal 5 closed
			5		Input Terminal 6 closed
			6		Input Terminal 7 closed
			7		Input Terminal 8 closed
4Bh	U1-11	Output Terminal Status	0		Control Circuit terminals M0, M1: “Closed”
			1		Control Circuit terminals M2 ~ M4: “Closed”
			2		Control Circuit terminals M5, M6: “Closed”
			3-6		Not Used
			7		Control Circuit terminals MA ~ MC: “Closed”

Notes:

- (1) Scaling depends on the setting of o1-03.
- (2) Display unit = 0.01A for models IMPULSE Series 3 2003 thru 2025 and 4001 thru 4011; display unit = 0.1A for models 2033 - 2300 and 4014 - 4605.

## Drive Parameters (U1-xx / Monitor Only) – Continued

### Class 66h, Instance 1 – Monitor Parameters 1

Monitor parameters all share the same service (GET), data type (Word) and number of bytes (2)

ATTRIBUTES (in hex)	PARAMETER	PARAMETER FUNCTION	PARAMETER SETTING	BIT NO.	LIMITS / DESCRIPTION		
4Ch	U1-12	Operation Status			0 Run		
		1 Zero-Speed					
		2 Reverse Run					
		3 Reset Signal Input					
		4 Speed Agree					
		5 Drive Operation Ready					
		6 Minor Fault					
		7 Major Fault					
4Dh	U1-13	Elapsed Time		Hours			
4Eh	U1-14	Software No. (CPU ID No.)		Software version number			
4Fh	U1-15	Control Circuit Term A1 Input Voltage	Input voltage signal at terminal A1 (+10V / +100.0% ~ -10V / -100.0%)				
5h	U1-16	Control Circuit Term A2 Input Voltage	Input voltage or mAmp signal at terminal A2 (+10V / +100.0% ~ -10V / -100.0%) or (4mA / 0.0% ~ 20mA / 100.0%)				
51h	U1-17	Control Circuit Term A3 Input Voltage	Input voltage signal at terminal A3 (+10V / +100.0% ~ -10V / -100.0%)				
52h	U1-18	Motor Secondary Current (Iq)	Motor Secondary Current-Iq (0.1%)				
53h	U1-19	Motor Exciting Current (Id)	Motor Rated Primary Current-Id (0.1%)				
54h	U1-20	Output Frequency after Soft-start	Max. Output Frequency (0.1 Hz)				
55h	U1-21	Automatic Speed Regulator (ASR) Input	ASR Input (0.01%)				
56h	U1-22	Automatic Speed Regulator (ASR) Output	ASR Output (0.01%)				
57h	U1-23	PG-Z2 CH2 Detection Speed	PG-Z2 CH2 Detection Speed (0.01%)				
58h	U1-24	PID Feedback Amount	PID Feedback Amount (0.01%)				
59h	U1-25	G5 IN4 Reference	Input value according to the setting of F3-01				
5Ah	U1-26	Output Voltage Reference Vq	Output Voltage-Vq (0.1V)				
5Bh	U1-27	Output Voltage Reference Vd	Output Voltage-Vd (0.1V)				
5Ch	U1-28	Software No. CPU	processor version number				
5Dh	U1-29	Load Weight	Weight Measurement				
5Fh	U1-30	SS Delta Speed	Snap Shaft Speed Difference				

## Drive Parameters (U1-xx / Monitor Only) – Continued

### Class 66h, Instance 1 – Monitor Parameters 1

Monitor parameters all share the same service (GET), data type (Word) and number of bytes (2)

ATTRIBUTES (in hex)	PARAMETER	PARAMETER FUNCTION	PARAMETER SETTING	BIT NO.	LIMITS / DESCRIPTION
060h	U1-32	ACR Output q Axis			ASR Output q Axis (0.1%)
061h	U1-33	ACR Output d Axis			ASR Output d Axis (0.1%)
062h	U1-34	OPE Detection			Parameter setting error
063h	U1-35	Zero Servo Motion Pulse			Pulse Count During Zero Servo
064h	U1-36	PID Input			PID Input (0.00%)
065h	U1-37	PID Output			PID Output (0.00%)
066h	U1-38	PID Setpoint			PID Setpoint (0.00%)
067h	U1-39	Memobus Communication Error			
068h	U1-40	FAN Accumulated Operation Time			
069h	U1-41	Cooling Fin Temperature			
06Ah			Not Used		
06Bh			Not Used		
06Ch	U1-44	ASR Output			ASR Out No Filter
06Dh			Not Used		
06Eh			Not Used		
06Fh			Not Used		
070h			Not Used		
071h	U1-49	CPU Occupation Rate			Amount of CPU Resources Being Used
072h	U1-50	Hook Height			Calculated Height of Hook (0.00%) (Height Measurement)
073h	U1-51	Motor Revolution			Number of Motor Revolutions Since Upper Limit (UL2) (Height Measurement)
074h	U1-52	Maintenance Timer			Number of Hours Remaining Before Maintenance is Required
075h	U1-53	Inch 2 Count			Number of Pulses Encoder has Moved Since Inch 2 Command

## Drive Parameters (U2-xx Fault Trace)

### Class 73h, Instance 1 – Fault Monitors

Monitor parameters all share the same service (GET), data type (Word) and number of bytes (2)

ATTRIBUTES (in hex)	PARAMETER	PARAMETER FUNCTION	PARAMETER SETTING	BIT NO.	LIMITS / DESCRIPTION
01h	U2-01	Current Fault	Code of current fault (1)		
02h	U2-02	Last Fault	Code of second to current fault (1)		
03h	U2-03	Frequency Ref. at Fault	Frequency Reference at the time of the current fault (0.0 to 400.0 Hz)		
04h	U2-04	Output Frequency at Fault	Output Frequency at the time of current fault (0.0 to 400.0 Hz)		
05h	U2-05	Output Current at Fault	Output Current at the time of current fault (drive rating /8192)		
06h	U2-06	Motor Speed at Fault	Motor Speed at the time of current fault (in 0.1 Hz)		
07h	U2-07	Output Voltage at Fault	Output Voltage at the time of current fault (in 0.1 V)		
08h	U2-08	DC Bus Voltage at	Output Voltage at the time of current fault (in 1 V)		
09h	U2-09	Output kWatts at Fault	Output Power at the time of current fault (in 0.1 kW)		
0Ah	U2-10	Torque Reference at Fault	Torque Reference at the time of current fault (in 0.1%)		
0Bh	U2-11	Input Terminal Status at Fault	0	Input Terminal 1 closed at time of fault	
			1	Input Terminal 2 closed at time of fault	
			2	Input Terminal 3 closed at time of fault	
			3	Input Terminal 4 closed at time of fault	
			4	Input Terminal 5 closed at time of fault	
			5	Input Terminal 6 closed at time of fault	
			6	Input Terminal 7 closed at time of fault	
			7	Input Terminal 8 closed at time of fault	

## Drive Parameters (U2-xx Fault Trace)

### Class 73h, Instance 1 – Fault Monitors

Monitor parameters all share the same service (GET), data type (Word) and number of bytes (2)

0Ch	U2-12	Output Terminal Status at Fault	0	Control Circuit terminals 9 & 10: "Closed"
			1	Control Circuit terminals 25 & 27: "Closed"
			2	Control Circuit terminals 26 & 27: "Closed"
			3-6	not used
			7	Control Circuit terminals 18 & 20: "Closed"
			0	Running at the time of fault
			1	Zero-Speed at the time of fault
			2	Reverse Running at the time of fault
0Dh	U2-13	Drive Status at Fault	3	Reset Signal Input at the time of fault
			4	Speed Agree at the time of fault
			5	Drive Operation Ready at the time of fault
			6	Minor Fault
			7	Major Fault
0Eh	U2-14	Elapsed Time at Fault	Elapsed Time at the time of fault (in hrs.)	

Notes:

(1) List of Drive Error Codes can be found in chapter 8, Error Codes and Troubleshooting.

# Drive Parameters (U3-xx Extended Fault History)

## Class 74h, Instance 1 – Extended Fault History

Monitor parameters all share the same service (GET), data type (Word) and number of bytes (2)

ATTRIBUTE S (in hex)	PARAMETER	PARAMETER FUNCTION	PARAMETER SETTING	BIT NO.	LIMITS / DESCRIPTION
01h	U3-01	Last Fault			Code of the most recent fault (1)
02h	U3-02	Fault Message 2			Code of the second to most recent fault (1)
03h	U3-03	Fault Message 3			Code of the third to most recent fault (1)
04h	U3-04	Fault Message 4			Code of the fourth to most recent fault (1)
05h	U3-05	Elapsed Time 1			Elapsed Time at the most recent fault occurrence
06h	U3-06	Elapsed Time 2			Elapsed Time at the second to most recent fault occurrence
07h	U3-07	Elapsed Time 3			Elapsed Time at the third to most recent fault
08h	U3-08	Elapsed Time 4			Elapsed Time at the fourth to most recent fault occurrence
09h	U3-09	Fault Message 5			Code of the fifth to most recent fault (1)
0Ah	U3-10	Fault Message 6			Code of the sixth to most recent fault (1)
0Bh	U3-11	Fault Message 7			Code of the seventh to most recent fault (1)
0Ch	U3-12	Fault Message 8			Code of the eighth to most recent fault (1)
0Dh	U3-13	Fault Message 9			Code of the ninth to most recent fault (1)
0Eh	U3-14	Fault Message 10			Code of the tenth to most recent fault (1)
0Fh	U3-15	Elapsed Time 5			Elapsed Time at the fifth to most recent fault occurrence
10h	U3-16	Elapsed Time 6			Elapsed Time at the sixth to most recent fault occurrence
11h	U3-17	Elapsed Time 7			Elapsed Time at the seventh to most recent fault occurrence
12h	U3-18	Elapsed Time 8			Elapsed Time at the eighth to most recent fault occurrence
13h	U3-19	Elapsed Time 9			Elapsed Time at the ninth to most recent fault occurrence
14h	U3-20	Elapsed Time 10			Elapsed Time at the tenth to most recent fault occurrence
15h	U3-21	Accumulated Operations			Accumulated Operations
16h	U3-22	U3-21 Rollover			Increments each time U3-21 reaches 65535. U3-21 is set to 0
17h	U3-23	OL / LC Count			OverLoad / Load Check Count

Notes:

(1) List of Drive Error Codes can be found in chapter 8, Error Codes and Troubleshooting.

## Drive Parameters (Read/Write)

### Class 67h, Instance 1 – A1- XX Initialize Parameters / A2-XX User Parameters

AX-XX parameters all share the same service (GET/SET), data type (Word) and number of bytes (2)

ATTRIBUTES (in hex)	PARAMETER	PARAMETER FUNCTION	PARAMETER SETTING	LIMITS / DESCRIPTION	INITIAL L VALUE
01h	A1-00	Language Selection	0	English	0
			1	French	
			2	Spanish	
02h	A1-01	Parameter Access Level	0	Operation Only	2
			1	User Program	
			2	Advanced	
			3	Factory	
03h	A1-02	Control Method Selection	0	V/f Control	2
			1	V/f Control w/ PG (Factory Access Only)	
			2	Open Loop Vector	
			3	Flux Vector	
04h	A1-03	Motion Select	0	Traverse	1
			1	Standard Hoist	
			2	No-Load Brake Hoist	
			3	Bucket Hoist

			1	3-Spd Multi-Step	
			2	5-Spd Multi-Step	
			3	2-Step Infinitely Variable	
			4	3-Step Infinitely Variable	
			5	Uni-Polar Analog	
			6	Bi-Polar Analog	
			7	G5IN4 Option Card	
			8	Serial Opt Card	
06h	A1-05	Initialize Parameters	0000	No Initialize	0
			1110	User Initialize	
			2220	2-wire Initialize	
07h	A1-06	User Password 1	0000 ~ 9999		0
09h	A1-07	Factory Password 2	0000 ~ 9999		0
01h ~ 2Bh	A2-01 ~ A2-32	User Selected Parameter 1 Through User Selected Parameter 32	Setting B1-01 ~ O4-02		0

## Drive Parameter (Read/Write) – continued

### Class 68h, Instance 1 – Application Parameters

BX-XX parameters all share the same service (GET/SET), data type (Word) and number of bytes (2)

ATTRIBUTE S (in hex)	PARAMETER	PARAMETER FUNCTION	PARAMETER SETTING	LIMITS / DESCRIPTION	INITIAL VALUE
01h	B1-01	Frequency Reference 1	0.00 to 400.00 Hz (1)		15.00
02h	B1-02	Frequency Reference 2	0.00 to 400.00 Hz (1)		30.00
03h	B1-03	Frequency Reference 3	0.00 to 400.00 Hz (1)		60.00
04h	B1-04	Frequency Reference 4	0.00 to 400.00 Hz (1)		45.00
05h	B1-05	Frequency Reference 5	0.00 to 400.00 Hz (1)		60.00
06h	B1-06	Frequency Reference 6	0.00 to 400.00 Hz (1)		0.00
07h	B1-07	Frequency Reference 7	0.00 to 400.00 Hz (1)		0.00
08h	B1-08	Frequency Reference 8	0.00 to 400.00 Hz (1)		0.00
09h	B1-09	Frequency Reference 9	0.00 to 400.00 Hz (1)		0.00
0Ah	B1-10	Frequency Reference 10	0.00 to 400.00 Hz (1)		0.00
0Bh	B1-11	Frequency Reference 11	0.00 to 400.00 Hz (1)		0.00
0Ch	B1-12	Frequency Reference 12	0.00 to 400.00 Hz (1)		0.00
0Dh	B1-13	Frequency Reference 13	0.00 to 400.00 Hz (1)		0.00
0Eh	B1-14	Frequency Reference 14	0.00 to 400.00 Hz (1)		0.00
0Fh	B1-15	Frequency Reference 15	0.00 to 400.00 Hz (1)		0.00
10h	B1-16	Frequency Reference 16	0.00 to 400.00 Hz (1)		0.00
11h	B1-17	Jog Frequency Reference	0.00 to 400.00 Hz (1)		6.00
12h	B1-18	Reference Priority <sup>1</sup>	0	Digital Reference Only	0
			1	Analog Reference Only	
			2	Higher Reference Select	
13h	B2-01	Frequency Reference Upper Limit	0.0 to 110.0%		100.0
14h	B2-02	Frequency Reference Lower Limit	0.0 to 110.0%		0.0
15h	B2-03	Master Speed Ref Lower Limit	0.0 to 110.0%		2
16h	B2-04	Alternate Upper Limit	0.0 to 110.0%		100
17h	B3-01	Reference Selection	0	Digital Operator	1
			1	Terminal	
			2	Serial Communication	
			3	Option PCB	
18h	B3-02	Operation Method Selection	0	Digital Operator	1
			1	Terminal	
			2	Serial Communication	
			3	Option PCB	

## Drive Parameter (Read/Write) – continued

### Class 68h, Instance 1 – Application Parameters

BX-XX parameters all share the same service (GET/SET), data type (Word) and number of bytes (2)

ATTRIBUTES (in hex)	PARAMETER	PARAMETER FUNCTION	PARAMETER SETTING	LIMITS / DESCRIPTION	INITIAL VALUE
19h	B3-03	Stopping Method Selection	0	Ramp to Stop	Determined by A1-03 (Motion)

			1	Enabled	
02h	C8-22	Brake Slip Detect	0	Disabled	0
			1	Enabled	
03h	C8-23	Brake Slip Detect Speed	0.0 to 10.0 Hz		1.0

## Drive Parameter (Read/Write) – continued

### Class 72h, Instance 1 – Auto-tune Parameters

CX-XX parameters all share the same service (GET/SET), data type (Word) and number of bytes (2)

ATTRIBUTES (in hex)	PARAMETER	PARAMETER FUNCTION	PARAMETER SETTING	LIMITS / DESCRIPTION	INITIAL VALUE
11h	T1-00	Motor Selection 1/2	0	1 <sup>st</sup> Motor	0
			1	2 <sup>nd</sup> Motor	
12h	T1-01	Tuning Mode Selection	0	Rotational Tune	0
			1	Stationary Auto Tune	
			2	Terminal Resistance	
			3	On-Dly Comp Tune	
13h	T1-02	Motor Output Power	0.4 ~ 650.0 HP		0.40
14h	T1-03	Motor Rated Voltage	0 ~ 255.5		230.0 (1)
15h	T1-04	Motor Rated Current	(2)		(3)
16h	T1-05	Base frequency	0 ~ 400.00Hz		60.00
17h	T1-06	Number of Motor Poles	2 ~ 48 Pole		4
18h	T1-07	Rated Motor Speed	0 ~ 24000 RPM		1750
19h	T1-08	PG Pulses/Rev	0 ~ 60000 RPM		1024

Notes (for this page only):

- (1) For 400V class, the value is twice that for the 200V class
- (2) Setting Range is 10 ~ 200% of inverter rated output current
- (3) *Initial value differs depending upon inverter capacity*

# Memory Registers

The drive has two types of memory, Volatile and Non-Volatile. Data held in Volatile memory will be lost when power is removed from the drive. Data held in Non-Volatile memory will be retained when power is removed from the drive. The drive also has active and inactive areas of memory. The different registers are saved and activated differently, as described below.

## Command Registers:

The command registers are stored in Volatile Memory. When writing to a command register the new data becomes inactive immediately. In the case of power loss, all data stored in these registers will not be retained.

## Monitor Registers:

The monitor registers are stored in Volatile Memory. These registers cannot be written to (read only registers). Any data read from the monitor registers will not be retained during a power loss situation.

## Parameter Registers:

The parameter registers are stored in Non-Volatile memory. When writing new data to parameter registers, the new data is not active.

Sending the ACCEPT command will cause the new data to become active. The ACCEPT command is accomplished by Setting a value of 0 into Accept Command Register at Class 64h, Instance 1, Attribute FEh. The accept command allows the drive to run with these changed parameters. It also allows parameters to again be changed from the drive keypad. The data is not saved to Non-Volatile Memory.

Sending the ENTER command will cause the new data to become active and to be saved in Non-Volatile Memory. The ENTER command is accomplished by Setting a value of 0 into Enter Command CIP Register at Class 64h, Instance 1, Attribute FFh. If power loss occurs after the new data has been saved (by using the ENTER command) into Non-Volatile Memory, the data will be retained.

## Special Registers:

The special registers are in Volatile Memory. These registers will not be retained during a power loss situation. When writing to a special register, the new data becomes active immediately.

### CAUTION

#### USE THE ENTER AND ACCEPT COMMAND ONLY WHEN NECESSARY!

The Life of the Non-Volatile EEPROM on the drive will support a finite number of operations. This means that the ENTER command can only be used a maximum of 100,000 times to store data in the EEPROM. After the specified number of operations, the EEPROM may fault (ERR), requiring the drive control board to be replaced.
