9 Signs Your Elevator Needs Replacing

Elevator drives are built to deliver years of reliable performance, but like any critical system component, eventually reach the end of their life cycle. Knowing what to look for can help building owners address issues proactively to avoid costly repairs and reduce downtime.

Here are nine signs that the elevator drive may be approaching the end of service life and should be evaluated for replacement:

1 Unexpected Faults and Shutdowns

2 Difficulty Finding Replacement Parts

3 Poor Ride Quality

4 Increased Maintenance

5 Recurring Performance Issues

6 Rising Energy Consumption

7 Aging Equipment

8 Limited Diagnostic Capabilities

9 Compatibility Challenges
